Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-27, drawn to methods of removing sodium from an animal subject comprising administering a sodium-binding composition comprising a sodium-binding polymer or an acid resin; or, a core-shell composition comprising a cation exchange core and a semi-permeable shell, classified in various subclasses of Class 424, depending on the composition contemplated.

II. Claims 28-44, drawn to methods of removing salt from an animal subject comprising administering a salt-binding composition comprising a salt-binding polymer, classified in various subclasses of Class 424, depending on the composition contemplated.

The inventions are distinct, each from the other, for the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the inventions have different effects.

A method of binding the specific cation sodium is distinct from a method of binding any possible salt.

The Groups have acquired a separate status in the art as shown by their different classification depending on the composition contemplated and their recognized, divergent subject matter. The searches required for each Group are not co-extensive resulting in an undue burden to the Examiner. Each Group is capable of supporting a separate patent. Thus restriction for examination purposes as indicated is proper.

Further, claims 1-44 are generic to the following disclosed patentably distinct species:  
sodium-binding compositions comprising a sodium-binding polymer or an acid resin; or, core-

shell compositions comprising a cation exchange core and a semi-permeable shell, and, salt-binding compositions comprising a salt-binding polymer, depending on the Group elected. The species are independent or distinct because a prior art reference anticipating claims under 35 U.S.C. 102 drawn to a species that is a composition comprising a polymer would not render the same claims obvious under 35 U.S.C. 103 with respect to another species comprising a resin. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed. Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, Applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Applicant is advised that to be complete, the reply to this requirement must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).

A telephone call to the attorney is not required where: 1) the restriction requirement is complex; 2) the application is being prosecuted *pro se*; or, 3) the Examiner knows from past experience that a telephone election will not be made. See MPEP 812.01.
